RE: Fitch Fuel Catalyst

To Whom It May Concern:

Working in conjunction with Advanced Combustion Technologies, we recently undertook trials on the CS Wave Sentinel and Atlantic Guardian using a Fitch System fitted to the Caterpillar harbour sets in order to reduce emissions and make fuel savings. After a trial period the results that came in were promising.

Comparing consumption and emission readings before and after the fitting of the catalyst significant reductions in emissions were noted and fuel savings were in the region of 7%. This is particularly encouraging in light of imminent atmospheric pollution control regulations and rising fuel costs. This is a system that we would consider fitting to all our vessels.

Yours Sincerely

Andrew Neilson-Watts

Ship Superintendent
